THE ART OF THE STUD

What makes them exceptional

Every stud earns its place at the lobe. Here's the four decisions behind this one.

Center Stone

A single emerald-cut citrine, its open step-facets built to catch light at every angle of the ear.

Four-Prong Basket

Four slender prongs lift the stone off the metal — maximum brilliance, minimum interference.

Comfort Backing

Screw back for the highest security on higher-carat studs, or push back for effortless everyday wear.

Lifetime Care

Free professional cleaning and prong inspection, for as long as you own the piece.

BACKING TYPE

Screw Back Push Back

Maximum security — the back threads onto the post and locks the earring in place. Best for higher-carat studs you'd never want to lose.

The four measures that matter

The same grading language used for diamonds, applied here to grade every gem in the collection.

01

Cut

The precision that unlocks a stone's fire and brilliance — an emerald cut trades sparkle for clean, architectural light.

02

Color

Graded on a consistent scale, where saturation and warmth are chosen deliberately rather than left to chance.

03

Clarity

A measure of a stone's natural inclusions — the fewer and smaller, the clearer the light passing through.

04

Carat

The weight of the stone, and its presence at the lobe — from a subtle 0.5ct up to a striking 10ct.
